

How can I tell if I have a GEN 1 or a GEN 2 Boogey Lights LED Controller?

Our GENERATION 2 (aka GEN2 or just G2) LED Controllers were released in June of 2023. Previous to this time, all Boogey Lights® LED controllers were GENERATION 1 (aka GEN1) LED controllers. Bluetooth capable GEN1 LED Controllers can only use the GEN1 Controller APP. The new GEN2 LED Controllers can be seen here: <https://www.boogeylights.com/gen2-bluetooth-rf-combo-led-controller/>. All GEN2 LED Controllers are Bluetooth capable and will only work with the new GEN2 LED Controller APP. The GEN1 and GEN2 APPs are not interchangeable. The way you can tell if you have a GEN2 LED controller is to look at the back of the controller. The MODEL number printed on the back will include a 'G2' designation (see photo examples below). GEN1 LED controllers will not have this designation.

GEN2 LED Controllers will have 'G2' as part of their model number. The model number appears on the back of the controller.
