

RV Awning Kit Wiring Diagram

Multi-Color, Multi-Function Wired Controller

PLEASE NOTE:
Controller and power adapter (if used) is water resistant but NOT waterproof. Be sure to mount in a dry location.

110VAC APPLICATIONS

If you are using the optional 110VAC power adapter instead of 12vdc power, you would connect the POSITIVE wire coming from the 110VAC power adapter to the POSITIVE wire of the controller. Connect the NEGATIVE wire coming from the 110VAC power adapter to the black wire of the controller (which is the ground wire). Then, plug in the 110VAC power adapter cable into your 110VAC power source.
