

## OPTIONAL SUCTION CUP MOUNTS – IMPORTANT INFORMATION

If you're using the optional Suction Cup mounting kit with the LED Flag, make sure you select a smooth, non-porous flat surface. Do not apply over decals, "wraps", or over 3M Diamond Shield. Also, do not apply to thin laminated surfaces that do not have a solid surface behind the laminate. The powerful suction can pull weak laminated surfaces away from their backing. The suction cup mounting system is intended to be used for temporary installations such as on the side of an RV or windshield. Once you have selected the location, follow these steps:

- 1) Using a wet cloth, clean the area on your RV or vehicle where you are going to attach the suction cups. Remember to not choose a spot that is over any decals. Painted surfaces are okay.
- 2) Using water, dampen the surface of the suction cup and be sure it is clean and damp when applying to surface.
- 3) Firmly press the suction cup against the surface that it is being attached to so that the cup is flat against surface.
- 4) Flip suction cup locking handle inward towards the other handle to lock into place. Gently tug on the cup to be sure it is securely attached.
- 5) Insert one end of the top of the flag frame (the ends of the flag frame are open) onto the holder post which is secured to the suction cup handle.
- 6) While holding or supporting the LED FLAG, repeat the process for the second suction cup holder at the other end of the flag.

**NOTE: it is important to make sure you dampen the suction cup before pressing to the mounting surface. While the suction cup will hold for awhile, without dampening the cup first, it will eventually lose suction and release.**

Remember to remove the LED FLAG before you move your RV, camper or vehicle! To remove the suction cup holder, simply release both locking levers and gently peel the cups away from the surface. Make sure you are supporting the LED FLAG so it doesn't fall.

## Shown Here with Optional Suction Cup Mount Kit

Quickly and easily mounts on most any smooth surface! Ideal for temporary mounting on the side of an RV, wall or window.

Easy setup! First, wipe the mounting surface clean. Then, dampen the suction cup with water. Next, firmly press the first suction cup against the surface (avoid decals). Flip suction cup locking handle inward until it locks. Tug on the suction cup to make sure it's stuck. Now, insert one end of the LED FLAG into the holder post. While holding the flag, repeat the process for the 2nd suction cup holder on the other end of the flag. Plug in your flag!
